

WARNING

BEFORE USING THE PRODUCT READ THE FOLLOWING INSTRUCTIONS AND LIMITS OF USE:

MOTO

- Driving a motorcycle is an intrinsically dangerous activity and can cause serious damage, severe injuries and even death.
- Motorcyclists must be aware of the wide range of foreseeable and unforeseeable risks and decide to take on these possible risks.
- Motorcyclists must use appropriate protective gear and must pay maximum attention to guarantee their safety while driving. They must also remember that no product can offer complete protection from injuries or damage to people or things in the event of accidents, falls, collisions or other.
- We recommend using the product correctly and NOT using it worn out, modified or damaged.

! Sidi neither guarantees nor assures, be it explicitly or implicitly, the suitability of its products for uses other than the ones specified.

! Sidi neither guarantees nor assures, be it explicitly or implicitly, the extent of the protection its products provide to people or things from injuries, death or damage.

LIMITS OF USE

- SIDI boots are manufactured to be used while riding a motorcycle and give LIMITED protection against cuts, lacerations and abrasions caused by falling off the vehicle and hitting the ground.
- The user must be aware of the fact that no footwear can give complete protection from injuries.
- It's the user's responsibility to verify the correct size of the boots and to wear them correctly. The user must also be aware that different climate conditions can influence the boots' protection and resistance to cuts.

CYCLE

No cycling shoes or other protective device can completely protect you in all foreseeable or unusual accidents. Riding a bicycle can be dangerous. In the event of a fall, collision or other accident, you may be seriously injured or killed, regardless of the type of protective equipment that you are wearing. Do not expect or rely on your Sidi cycling shoes or other apparel to prevent or reduce injury in the event of an accident. In rare circumstances, wearing technical footwear may actually increase your injury. The only way to fully avoid being injured while riding a bicycle is not to ride.

YOUR SIDI FOOTWEAR IS THE RESULT OF QUALITY CRAFTSMANSHIP. PLEASE FOLLOW THESE RECOMMENDATIONS CAREFULLY IN ORDER TO MAINTAIN THE INTEGRITY OF YOUR SHOES AS LONG AS POSSIBLE

DO'S

- Clean with a damp sponge.
- Dry in a dry and ventilated place.
- Stuff with newspaper to absorb the dampness and to keep the shape.
- Store in a dry and ventilated place.
- If after use the boots/shoes are not damp, simply clean them with a soft brush.
- If the boots/shoes are equipped with removable protective elements, buckles or other fastening mechanism, clean them carefully from sand and mud and now and again use some silicone spray.
- If the boots/shoes are equipped with buckles or other kinds of closures, clean them carefully to remove dirt or mud.
- If the boots/shoes are equipped with screw-on protective elements or the removable SPS sole system, carefully remove, clean and lubricate the screws to keep them in perfect working conditions.
- To minimise the potential "creaking" noise of the boots/shoes' plastic parts we recommend applying silicone spray regularly.

DON'TS

- Do not wash in washing machine or spray clean.
- Do not use strong detergents or abrasive brushes.
- When drying, never place them near or on heaters, fireplaces or other heat sources (the use of detergents and rapid drying may cause excessive hardening or cracks in the leather or other material).

CLEANING AND MAINTENANCE OF SIDI SHOES WITH GORE-TEX® MEMBRANE

- To clean your Sidi boots/shoes with Gore-Tex® membrane, we suggest you use products recommended by Gore - www.gore-tex.com.

MAINTENANCE

- Do not keep Sidi boots/shoes in humid areas like cellars or air-tight containers like plastic bags as these facilitate the formation of mould and strong odours, which can damage the boots/shoes over time.
- Make sure the boots/shoes are dry and put them in a well-ventilated place, stuff soft paper in the toe area of the boots/shoes to maintain the shape.

CHOOSING THE CORRECT SIZE

- The footwear is produced on the basis of conventional sizes.
- One's personal size can be used as the basis upon which to choose suitably-sized boots.
- However, we recommend ALWAYS trying the boots on before purchasing them in that shoe sizes can differ between the different types of footwear. We also suggest the boot be tried on when wearing socks that are usually worn and with other clothing that could influence the fit of the boots.
- Please remember that the fit depends on the length, width and morphology of the foot.
- Try on the boots, closing all the mechanisms/laces/zippers starting with the lowest one and proceeding upwards: try walking, bending, sitting. The boots should not be too tight because with normal use the boot tends to loosen slightly, nor too wide because there is a risk of compromising sensitivity towards external agents.

TO AVOID DAMAGING THE ZIPPER WHEN PUTTING ON YOUR SIDI BOOTS, MAKE SURE THESE INSTRUCTIONS ARE FOLLOWED:

1. Before putting on the boot, make sure the zipper is completely down. On some models the strap at the height of the instep must be opened first.
2. With the foot inside the boot, slightly bend leg forward so that the boot takes on its natural shape.
3. Pull both sides of the boot together simultaneously to bring the two sides of the zipper together; if necessary, and especially if leather pants or suit are being worn, release the adjustment systems on the calf.
- Now carefully pull up the zipper until closed. Do not use excessive force so as not to damage the zipper and the cursor. Make sure that nothing blocks the zipper. Before taking the boot off, make sure that the zipper is completely open.

FEATURES OF SIDI PRODUCTS

- To produce its footwear, Sidi uses top quality materials, designed in compliance with the laws in force and the protection of the environment.
- For this reason, the microfibers used are delicate. In particular the fluorescent ones, and when used over time and with exposure to UV rays may lose their brightness, while polyurethane plastics may turn yellow.
- Footwear must be cleaned with mild detergents only: it is also advisable to dry them away from direct heat sources, to prevent the microfiber from stiffening and peeling. Also avoid drying in humid environments, inside the box itself or in their bag, poor drying combined with sweat, favours the onset of mold, which could lead to the creation of air bubbles on the microfiber surface.
- Sidi footwear is a handcrafted product; small folds or imperfections cannot be considered manufacturing defects.
- Sidi does not guarantee replacement in the event of improper use, tampering, modifications and / or failure to comply with the maintenance instructions contained in the User Manual - www.sidi.com

WARRANTY

These Sidi shoes have undergone rigorous multi-point quality control checks to ensure our product has arrived to you with the standard we hold ourselves to. These Sidi shoes are guaranteed against defects regarding materials and craftsmanship, with the exception of defects occurring due to negligence, misuse, carelessness, improper maintenance or accidents.

When used, the product begins naturally deteriorating through wear and tear. In order to benefit from the guarantee, the consumer must contact a Sidi dealer and include proof of purchase.

Warranty requests submitted by the end user to Sidi, where the damage to the product was caused by the user or products are returned in unsuitable hygienic conditions will not be considered.

Shoes will be checked by trained staff who will evaluate whether to repair or replace them.

If the defect found is covered by the warranty, Sidi will bear the replacement or repair costs. In cases where the defect is attributable to the consumer, the product will not be replaced and, at the company's discretion, a shipping and/or repair cost may be charged to the consumer.
